PROJECTS

Brain Tumor Classification using MRI Images

- Designed and trained CNN and VGG16 models for multi-class MRI image classification
- Built an end-to-end system using Flask (backend) and React (frontend) for real-time predictions
- Applied data preprocessing, augmentation, and model evaluation using TensorFlow/Keras

TruthLab - AI-Based Fake News Detector

- Developed a full-stack web app using React.js and Flask to detect fake news using AI/NLP
- Integrated a pre-trained ML model (Hugging Face) to generate real-time credibility scores
- Built and tested REST APIs for seamless frontend-backend communication

University Sports Management System

- Developed a web-based platform using Laravel (PHP), MySQL, HTML, CSS, Bootstrap to manage university sports activities
- Implemented features including student registration, team management, community interaction, and admin dashboard
- Built a centralized system to streamline communication and sports coordination

SKILLS
